

Report AnaCredit

Methodology used for the comparison between AnaCredit and FINREP reports from 2023/12 onwards

Version 2.4

June 2025

Summary of versions

Version	Date	Comments
1.0.0	14 March 2022	Initial Version
1.0.1	27 July 2022	Update of main debtor identification, summary table and DQI threshold
1.0.2	05 October 2022	Expansion of concerned reporting population for this comparison
1.0.3	24 October 2022	Clarifications for observed agents with a legal entity outside of reporting member states have been added
1.0.4	21 June 2023	Advances which are not loans are now excluded from the calculated data point using the FINREP table F 5.01
2.0	13 November 2023	Small updates and introduction of the flag "DBTR_RIAD_FND" Update of the DQI calculation
2.1	5 February 2024	Update of the deadline for any corrections
2.2	3 January 2025	Update of items to be corrected
2.3	30 April 2025	Precision of deadlines
2.4	04 June 2025	Correction of DP_FNRP_F1800_ALL_1N FINREP side identification

1 Introduction

The European Central Bank (ECB) and the national central banks (NCB) have introduced a quarterly comparison report between AnaCredit and FINREP. The main objective of these reports consists in evaluating the consistency between the reports and in verifying the completeness of AnaCredit data.

From June 2022, all reporting agents with head offices in Luxembourg and reporting FINREP data to the CSSF, are subject to the above-mentioned comparison report and will have to correct any discrepancies within the data. Furthermore, also observed agents, where the head office is outside of a reporting member state, are subject to this comparison. It is important to know that the FINREP comparison will be performed at the solo entity level (N version of FINREP). This means that if a reporting agent has multiple observed agents, then the data of all the observed agents are summed up, in order to compare it to the N version of FINREP.

For reporting agents under the BCL's competency, comparisons with FINREP data will enter into force at the ECB from June 2022 onwards. The comparison will start with selected data points available in the FINREP F 18.00 template, as this one offers benchmarks for the most relevant data breakdowns and attributes.

In terms of data attributes, the benchmarks relate to:

- the net carrying amount of loans and advances;
- the net carrying amount of loans and advances relating to performing exposures;
- the net carrying amount of loans and advances relating to non-performing exposures;
- the amount of accumulated impairment and accumulated negative changes in fair value due to credit risk and provisions of loans and advances relating to non-performing exposures.

For additional information, the F 6.01 template, which includes a breakdown of the non-financials corporations by economic activity (NACE codes), will also be provided. Reporting agents, which have many counterparties not resident in a reporting member state, may find some differences since the economic activity is not mandatory for these counterparties.

In this context, the BCL wishes to inform its reporting agents of any inconsistencies detected in order to anticipate their corrections. It is important to note that the ECB relies on the reference data of the RIAD database for the classification of counterparties. It is therefore conceivable that DQIs considered acceptable at the BCL are not acceptable at the ECB. This discrepancy could possibly require a resubmission of the reporting agent.

AnaCredit	Methodology used for the comparison between AnaCredit and FINREP	4 / 27
-----------	--	--------

2 Methodology

2.1 Basic principles

The comparison between AnaCredit and FINREP comprises 38 items ("aggregates") and 1 total item. With regard to FINREP aggregates, corrections are expected for the total item only from June 2022 onwards. Hence, retroactive correction of the inconsistencies is not required. Indeed, the data quality indicator (DQIs) on the total item is only going to be applied from the reference month of June 2022 onwards.

Considering branches, where the legal entity is outside of the reporting member states, differences between AnaCredit and FINREP can appear due to the fact that the carrying amount should not be reported for intracompany loans. As such, reporting agents have to analyse our feedbacks, while taking into account intracompany loans, which are not included in the FINREP Overview and are in the excluded sheet. Only the sections, where loans to "Central banks and credit institutions" should be present and the total, are impacted by intracompany loans. As such, if the only differences in your reports are due to the intracompany issue, please send us a confirmation via mail after having performed your analysis.

Furthermore, some attributes, as like the performing status, are not required for observed agents, which are not subject to capital requirements. As such, differences in the sub-aggregates could be caused by this issue.

In this comparison, the information provided on the main debtor will be taken into account for the classification of multi-debtor instruments (institutional sector / economic activity). In order to identify the main debtor, the debtor which is most indebted vis-à-vis the bank is the more relevant one. In the case that two or more debtors have the same amount of debt, the first debtor in the list will be considered as the main debtor.

Furthermore, "advances that are not loans" are included in the FINREP F 18.00 template, but are not collected in AnaCredit. In order to compare AnaCredit to the FINREP F18.00 table, we will deduct the amounts reported in the F 5.01 table, whenever this table is reported by the reporting agent to the CSSF. This correction will be performed on the following benchmarks: DP_FNRP_F1800_All_00, DP_FNRP_F1800_BNK_00, DP_FNRP_F1800_GOV_00, DP_FNRP_F1800_OFI_00, and DP_FNRP_F1800_NFC_00. This correction cannot be done

AnaCredit	Methodology used for the comparison between AnaCredit and FINREP	5 / 27
-----------	--	--------

at any other sub-aggregate level, as the F 5.01 table is only split by the institutional sector.

Another exception has to be made for the accumulated impairments and negative fair value changes for loans at LOCOM (Lower of Cost or Market). As the development of the ITS has continued, moderate LOCOM assets are now cost based instruments subject to impairment, while strict LOCOM assets should be considered as instruments not subject to impairment. Moreover, in the case of non-performing strict LOCOM assets the accumulated net change in fair value due to credit risk should be reported under FINREP. As this development has not been considered at the inception of AnaCredit, differences may appear. In this case, a reporting agent would need to contact the BCL in order to find a solution. One solution in AnaCredit could consist in reporting the accumulated impairment for non-performing moderate LOCOM assets while the accumulated net change in fair value due to credit risk should be reported for strict LOCOM assets.

It is important to know that the FINREP comparison will be further developed in the near future, with additional aggregates becoming mandatory. As such, reporting agents are strongly advised to consider the sub-aggregates for possible corrections.

The level of consistency of AnaCredit reports compared to FINREP reports is assessed based on a DQI calculated by the BCL. The table below summarizes the qualitative requirements according to the reference periods.

Items	Threshold	
Total Item	DQI < 0,75%	
DP_FNRP_F1800_ALL_0P DP_FNRP_F1800_ALL_0N DP_FNRP_F1800_ALL_1N	DQI < 2,50%	From 2025-03 onwards
Other Sub-Aggregates	Highly Recommended	

The DQI is calculated as the amount affected divided by the total outstanding nominal amount of the observed agent. Please find below the calculation for the DQI:

$$FINREP\ DQI\ for\ Volumes = \frac{abs(AnaCredit_Amount - FINREP_Amount)}{Outstanding\ nominal\ amount\ of\ OA}$$

, where OA=Observed agent

AnaCredit	Methodology used for the comparison between AnaCredit and FINREP	6 / 27
-----------	--	--------

Please note that the threshold of 25 kEUR applied in AnaCredit does not exist in FINREP reporting. Therefore, the amount reported in AnaCredit should never be greater than the amount shown in the FINREP report.

We would like to remind you that all attributes and acceptable values are described more in detail in [manual part II](#).

2.2 Comparison with FINREP

2.2.1 Calculation method

The aggregates calculated for the comparison of AnaCredit and FINREP data are described in this chapter.

AnaCredit instruments are broken down based on the following attributes:

- Institutional sector (INSTTTNL_SCTR), where:
 - INSTTTNL_SCTR_MN_DBTR = the main debtor's institutional sector
- Economic Activity (ECNMC_ACTVTY), where:
 - ECNMC_ACTVTY_MN_DBTR = the main debtor's economic activity
- Recognition Status (RCGNTN_STTS)
- Accounting Classification of instrument (ACCNTNG_CLSSFCTN)
- Performing Status (PRFRMNG_STTS)

Similarly, the FINREP sub-aggregates are aggregated taking into account the following variables:

- Institutional sector
- Economic Activity
- Recognition Status
- Accounting Classification of instrument
- Performing Status

AnaCredit	Methodology used for the comparison between AnaCredit and FINREP	7 / 27
-----------	--	--------

Thus, the AnaCredit-FINREP comparison will include the following 39 aggregates¹:

Item	Description	AnaCredit	FINREP

2.2.2 Instruments excluded from the FINREP calculation

It is important to note that only instruments eligible for FINREP and meeting a certain level of quality are considered in the calculation of aggregates. In this regard, flags have been created in order to i) identify FINREP instruments and to ii) check the data quality. The methodology is described in detail below.

2.2.2.1 FINREP instruments identification flags

Three flags are calculated to determine the eligibility of instruments for the calculation of FINREP aggregates and they can take the value of:

- 1 (included for the calculation of FINREP aggregates)
- 0 (excluded for the calculation of FINREP aggregates)
- -1 (attribute missing)

Instruments for which at least one flag is equal to 0 or -1 are excluded from the calculation of the aggregates. These instruments are therefore listed in the excluded instruments sheet of the comparison report. The data should be checked and, if necessary, corrected.

- CRRYNG_AMNT_RPRTD

Only instruments, where the carrying amount has been reported, are considered in the calculation of FINREP aggregates. This flag automatically excludes all intracompany loans.

```
IF CRRYNG_AMNT <> ""
THEN CRRYNG_AMNT_RPRTD = 1;
ELSE IF (CRRYNG_AMNT = "" AND RCGNTN_STTS = "Entirely derecognised") OR
(CRRYNG_AMNT = "" AND (HD_OFFFC_UNDRRT_ID_OA = HD_OFFFC_UNDRRT_ID_MN_DBTR))
THEN CRRYNG_AMNT_RPRTD = 0;
ELSE CRRYNG_AMNT_RPRTD = -1;
```

Where:

- HD_OFFFC_UNDRRT_ID_OA = the head office undertaking id of the observed agent
- HD_OFFFC_UNDRRT_ID_MN_DBTR = the head office undertaking id of the main debtor

AnaCredit	Methodology used for the comparison between AnaCredit and FINREP	16 / 27
-----------	--	---------

- RCGNTN_FLG

Fully derecognized instruments are not considered in the calculation of FINREP aggregates.

```

IF RCGNTN_STTS IN ("Entirely recognised", "Recognised to the extent of the institution's continuing involvement")
THEN RCGNTN_FLG = 1;

ELSE IF RCGNTN_STTS = "Entirely derecognised"
THEN RCGNTN_FLG = 0;

ELSE RCGNTN_FLG = -1;
  
```

- ACCNTNG_PF_IDNTFCTN

Instruments, where the accounting classifications falls into the categories "Financial assets held for trading (IFRS)", "Trading Financial assets (nGAAP)" or "Financial assets held for trading (nGAAP)" are excluded in the calculation of the FINREP aggregates.

```

IF ACCNTNG_CLSSFCTN NOT IN ("Financial assets held for trading (IFRS)", "Trading Financial assets (nGAAP)", "Financial assets held for trading (nGAAP)")
THEN ACCNTNG_PF_IDNTFCTN = 1;

ELSE IF ACCNTNG_CLSSFCTN IN ("Financial assets held for trading (IFRS)", "Trading Financial assets (nGAAP)", "Financial assets held for trading (nGAAP)")
THEN ACCNTNG_PF_IDNTFCTN = 0;

ELSE ACCNTNG_PF_IDNTFCTN = -1;
  
```

Finally, the flag on the FINREP eligibility of an instrument in AnaCredit is calculated taking into account the results of the three flags described above:

```

IF CRRYNG_AMNT_RPRTD = 1 AND RCGNTN_FLG = 1 AND ACCNTNG_PF_IDNTFCTN = 1
THEN IS_FR_INSTRMNT = 1;

ELSE IS_FR_INSTRMNT = 0;
  
```

AnaCredit	Methodology used for the comparison between AnaCredit and FINREP	17 / 27
-----------	--	---------

All instruments whose flag “IS_FR_INSTRMNT” is equal to 1 are taken into account when calculating FINREP aggregates. Conversely, instruments with a flag equal to 0 are excluded from the calculation. These are listed in the feedback “FR_EXC_INSTRMNT” (cf. chapter 2.5.1.2 below).

2.2.2.2 Data quality flags

Similar to the FINREP instrument identification flags described above, the data quality flags are first calculated individually before they are added to the global flag. The latter indicates whether the data quality of an instrument is sufficient to be included in the FINREP aggregates. The data quality flags can take three values:

- 1 (the quality is good)
No correction is expected.
- 0 (quality cannot be measured)
It is up to the reporting agent to verify the data if a difference is noted in the DQI.
- -1 (an error was detected)
The data needs to be corrected.

Instruments for which at least one flag is equal to 0 or -1 are excluded from the calculation of the aggregates. These instruments are therefore listed in the excluded instruments file. The data should be checked and, if necessary, corrected.

- IS_ACCNTNG_RPRTD

This flag checks if accounting data has been reported.

```

IF INSTRMNT.INSTRMNT_ID EXISTS IN ACCNTNG.INSTRMNT_ID
THEN IS_ACCNTNG_RPRTD = 1;
ELSE IS_ACCNTNG_RPRTD = -1;
  
```

- **IS_ECNMC_ACTVTY_RPRTD**

This flag verifies that the economic activity of the main debtor of the instrument is reported².

```

IF ECNMC_ACTVTY_MN_DBTR = "" AND INSTTTNL_SCTR_MN_DBTR = "S11" AND
CNTRY_MN_DBTR in (RMS)

THEN IS_ECNMC_ACTVTY_RPRTD= -1;

ELSE IF ECNMC_ACTVTY_MN_DBTR = "" AND INSTTTNL_SCTR_MN_DBTR = "S11"

THEN IS_ECNMC_ACTVTY_RPRTD= 0;

ELSE IS_ECNMC_ACTVTY_RPRTD= 1;
  
```

Where:

- ECNMC_ACTVTY_MN_DBTR = the main debtor's economic activity
- INSTTTNL_SCTR_MN_DBTR = the main debtor's institutional sector

- **IS_INSTTTNL_SCTR_RPRTD**

This flag checks whether the institutional sector of the main debtor has been reported.

```

IF INSTTTNL_SCTR_MN_DBTR is not NULL

THEN IS_INSTTTNL_SCTR_RPRTD = 1;

ELSE IS_INSTTTNL_SCTR_RPRTD = -1;
  
```

Where:

- INSTTTNL_SCTR_MN_DBTR = the main debtor's institutional sector

² Because the economic activity is not required for counterparties outside of a reporting member state, a 0 will not lead to an exclusion.

All of the flags described above are used to identify quality issues. If one of these flags is equal to -1, the data quality for a specific instrument is insufficient and the instrument is excluded from the FINREP calculation. The data quality is summarized in the following flag:

```

IF IS_ACCNTNG_RPRTD = -1 OR IS_INSTTTNL_SCTR_RPRTD= -1 OR VLDTN_RLS = -1

THEN DQ_FLG = -1;

ELSE DQ_FLG = 1;
  
```

In addition to the flags calculated above, some validation rules are also provided in the form of flags (grouped under “VLDTN_RLS” in the box above). This is the result of data quality checks on attributes necessary for the mapping of a counterparty to RIAD. If one of these flags is equal to -1, then the counterparty cannot be associated with a counterparty in RIAD and the instruments linked to these counterparties are excluded from the calculation of the aggregates.

Finally, the feedback sheet “FR_EXC_INSTRMNT” also contains the flag “DBTR_RIAD_FND”, which tells the reporting agent if a RIAD code has been found for the counterparty or not. In the case where no code was found, the reporting agent should verify the identification of the counterparty and in the case where no error is spotted contact sig@bcl.lu, with the concerned counterparty.

2.2.3 Solution indications

There are many sources of inconsistency between reports. Below are listed some recurring errors.

1 Insufficient data quality

Insufficient data quality is highlighted by the flags in chapter 2.2.2.2. Data with errors should be analysed first. As a first step, it is recommended to focus on instruments with a high outstanding nominal amount. In fact, the more the quality of an instrument with a high outstanding amount improves, the greater the impact on the DQI. It is for this reason that the instruments are sorted in descending order according to the carrying amount in the feedback “FR_EXC_INSTRMNT”.

The most frequent quality deficiencies are as follows:

- Institutional sector of the main debtor not reported
- National identifier not reported

- National identifier type not reported and/or inconsistent national identifier

2 The portfolio is incomplete (non-reported instruments)

If the balance of instruments listed in the excluded instruments file does not explain the difference between FINREP and AnaCredit aggregates, then it is very likely that part of the AnaCredit portfolio has not been reported.

However, inconsistencies can be detected without requiring corrections. These are mainly reporting agents whose portfolio contains a large number of instruments with an outstanding nominal amount/carrying amount of less than 25 kEUR.

We would also like to remind you that positions with the BCL must be reported in AnaCredit. Furthermore, please remember that intracompany loans are excluded from the FINREP comparison.

In the case, where instruments are missing in AnaCredit, you will also have to reconsider the IBSI comparison, as it could have an impact on it.

3 Some counterparties were broken down incorrectly (diverging institutional sector)

When inconsistencies detected at the level of the sub-aggregates are substantial while the total is very similar, it is very likely that the classification of the counterparties is not correct (e.g. a non-financial corporation reported with an institutional sector “S.121”).

2.3 Reports

2.3.1 Feedback provided

During the AnaCredit-FINREP comparison, one file is made available to reporting agents. This .xlsx file always includes the Overview sheet:

- **FR_Overview** (overview of FINREP DQI results)

The feedback file can also contain two additional worksheets, namely:

- **FR_EXC_INSTRMNT** (list of instruments excluded from FINREP calculation)
- **FR_INC_INSTRMNT** (list of instruments included in the FINREP calculation)

The two types of “Overview” and “Excluded” worksheets are described in more detail below.

AnaCredit	Methodology used for the comparison between AnaCredit and FINREP	21 / 27
-----------	--	---------

2.3.1.1 Results of the calculation of aggregates

The “Overview” file includes the aggregates calculated for AnaCredit and FINREP as well as the DQIs calculated on the comparison.

An example of an FINREP comparison table is available in Annex 4.2.1. In order to facilitate the interpretation of this table, the DQIs are coloured as follows:

- Green: the DQI is within the accepted range and no correction is expected
- Yellow: the DQI is above the required threshold. Correction is not required. However, reporting agents are strongly encouraged to correct these sub-aggregates in anticipation of more extensive requirements.
- Red: the DQI is above the required threshold. Correction is required.

2.3.1.2 List of instruments excluded from the calculation of aggregates

The “Excluded” sheet lists all the instruments excluded from the calculation of aggregates based on the flags described above. An instrument is added to the list when at least one of the two flags DQ_FLG or IS_FR_INSTRMNT is equal to 0 or -1.

The list is ordered as follows:

- 1 IS_FR_INSTRMNT, in descending order
- 2 DQ_FLG, in ascending order
- 3 CRRYNG_AMNT, in descending order

Therefore, it is recommended to analyse the first observations in the list first, which are most likely to have the greatest impact on the aggregates. An example of the excluded instruments table can be found in Annex 4.2.2.

2.3.2 Communication frequency and delay

The comparison reports are sent quarterly, regardless of resubmissions sent by reporting agents. Ad hoc reports can be generated upon request from reporting agents.

AnaCredit	Methodology used for the comparison between AnaCredit and FINREP	22 / 27
-----------	--	---------

2.3.3 Revision deadlines

Due to the implementation of the new non-compliance procedure at the ECB, the reporting agents have a maximum of 20 working days to correct any DQIs above the required threshold, starting from the date of the first feedback. For any feedback sent after, the reporting agent has the usual 5 days to correct remaining errors, as is the case for validation errors. In addition, before proceeding to a resubmission (regardless the type of report), reporting agents are asked to confirm by email the reports and the reference periods to be resubmitted.

Future submissions should already take into account any inconsistencies detected.

3 Contact data at the BCL

For any question related to the AnaCredit report, please contact the AnaCredit team at the BCL (reporting.anacredit@bcl.lu).

For any question, which concerns more precisely referential data, please contact the referential data team at the BCL (sig@bcl.lu).
